3. No gear, No pulley, No V-belt
4. Stainless steel 4 blade cutter
5. Stainless steel filters 8 sets
6. MCB switch for motor protection
7. Material feeding regulator
8. High quality electric motor
9. Heavy duty grinding chamber
10. Micro fine grinding
11. Maintenance free
12. No wastage after grinding

OPERATING INSTRUCTIONS

1. First of all, set the filter net as per your grinding requirement then close the grinding chamber door.
2. For masala grinding, use the folding hopper. Fix it with the grinding door.
3. Please use the cloth at the bottom of grinding chamber.
4. Make sure the feeding regulator is close means set on number '0'.
5. Please fill the hopper by grinding material.
6. Turn the main switch and turn ON the MCB switch.
7. Please set the feeding regulator as per the AMPERE METER indicator as below instructions
Single Phase : 1HP 6A
8. Once the material will finish from the hopper then wait for few minutes cause some material left in grinding chamber to grind. Clean the grinding chamber before you grind another material.
9. NOTE: For any reason, If the machine will stop suddenly during grinding then close the feeding regulator and open the grinding door and clean the material from it. Now restart the machine.
10. Once you done with grinding, clean the grinding chamber and filters properly by brush.

HOW TO USE FILTERS & IMPORTANT NOTE

Filter No. 0 and 1 : Use it for fine grinding of wheat, besan etc etc.

Filter No. 2 and 3 : Wheat, Jowar, Millet, Sugar, Maize etc etc

Filter No. 4 and 7 : These filters are used for coarse grinding.

NOTE: If you want to grind TURMERIC, RED CHILIES, MAIZE (for these kind of hard material) please make small pieces of the material. As per the requirement use the extra hopper. Then use the filter no. 4 or bigger size and turn ON the machine. Open the regulator as we

IMPORTANT NOTE

1. To increase the flow of material rotate the regulator in clockwise direction and to decrease the material flow rotate the regulator in anti-clockwise direction.
2. Make sure the plug connection must have EARTHING.
3. Regulator is used to increase or decrease the material flow into grinding chamber.
4. Keep the machine in little bit open space for better air circulation.
5. SHUT the grinding chamber door before you turn ON the machine.
